# 1 Study Overview

## Background/Introduction:

HIV is a sexually transmitted infection that attacks the human immune system, and results in AIDS at the most advanced stage of infection. Once they get HIV, a patient cannot be cured. Therefore, prevention and treatment efforts for HIV are very important. In the 1980s-1990s, the HIV pandemic swept the globe, and in particular devastated queer communities due to many gay men passing away from the disease. Men who have sex with other men, referred to as MSM in the study, are at particular risk of HIV if they have anal sex without protection. PrEP, the prevention method discussed in this study which is meant to be taken as a daily pill, has been shown to be very effective at reducing the risk of infection. Young MSM from ages 18-24, who are part of minority groups (Black/Latinx) are a group that are at risk but do not often know of or use PrEP. They also may engage in other behaviors that could put them at higher risk of HIV, such as binge drinking or drug usage. Because of this, spreading awareness for HIV prevention and examining its relationship to other risk factors is particularly important.

### 1.1 Study Aims

**Primary aim:** To determine the difference in effectiveness between several different forms of internet outreach, in particular social media platforms, dating apps, and search engines, in encouraging MSM who are at higher risk of HIV to engage in HIV prevention efforts. This is determined by the number of HIV test kits that they order.

**Secondary aims:**

Examined if there was a correlation between the primary outcome (number of self-test kits ordered) and the following variables:

- 1) Reported substance use
- 2) Stage of health behavior change for HIV testing (Precontemplation, Contemplation, Determination, Action, Maintenance)
- 3) Attitudes toward HIV testing and treatment
- 4) HIV-related stigma
- 5) Medical mistrust
- 6) Opinions about PrEP measures

**Exploratory aim:**

According to the manuscript, "As an exploratory outcome, we recorded the advertisement metrics of each campaign to measure differences in the reach and cost."

### 1.2 Study Hypotheses

#### 1.2.1 Primary Hypotheses

Let  $r_{ij}$  denote test kit order rate for wave number  $i$  and platform number  $j$ . The number of test kits ordered per platform is assumed to follow a Poisson process with this rate.

Where  $i \in \{1, 2\}$  and  $j \in \{1, 2, 3\}$  for {social media, dating apps, search engine}

Null hypothesis:  $r_{11} = \dots = r_{23}$

Alternative hypothesis:  $r_{ij} \neq r_{i'j'}$  for some  $i, j, i', j'$  where  $i \neq i'$  and  $j \neq j'$

#### 1.2.2 Secondary Hypotheses

Null hypothesis 1: There is no association between reported substance use and the rate of test kit ordering.

Alternative hypothesis 1: There is some association between reported substance use and the rate of test kit ordering.

Null hypothesis 2: There is no association between the stage of health behavior change for HIV testing and the rate of test kit ordering.

Alternative hypothesis 2: There is some association between stage of health behavior change for HIV testing and the rate of test kit ordering.

Null hypothesis 3: There is no association between attitudes toward HIV testing and treatment and the rate of test kit ordering.

Alternative hypothesis 3: There is some association between attitudes toward HIV testing and treatment and the rate of test kit ordering.

Null hypothesis 4: There is no association between HIV-related stigma and the rate of test kit ordering.

Alternative hypothesis 4: There is some association between HIV-related stigma and the rate of test kit ordering.

Null hypothesis 5: There is no association between medical mistrust and the rate of test kit ordering.

Alternative hypothesis 5: There is some association between medical mistrust and the rate of test kit ordering.

Null hypothesis 6: There is no association between opinions about PrEP measures and the rate of test kit ordering.

Alternative hypothesis 6: There is some association between opinions about PrEP measures and the rate of test kit ordering.

## 2 Study Population

### 2.1 Inclusion Criteria

As stated in the protocol, the participant was included if they had all the following traits:

- Have clicked on one of the study-specific advertisements posted on the platforms/ websites;
- Have been biologically born male (cis-gender man), per participant self-report;
- Report condomless anal intercourse AND more than one male sex partner in the 90 days prior to the date of the screening questionnaire;
- Be between the ages of 18-30 years old, inclusive;
- Self-identify as Latino and/or Black/African American; (multiracial is also OK)
- Not currently on PrEP and haven't taken PrEP in the last six months prior to the date of the screening questionnaire (per participant self-report);
- Have not tested for HIV in the last 3 months prior to the date of the screening questionnaire (per participant self-report);
- Have a Facebook account (for identity validation to reduce duplicate attempts at enrollment);
- Be willing to provide contact information (phone number, email) to the study team.

### 2.2 Exclusion Criteria

As stated in the protocol, the participant was excluded if they met any of the exclusion criteria:

- Were HIV-positive already, less than 30 days prior to the date of screening
- Were currently undergoing treatment for HIV infection
- Unwilling or unable to provide informed consent.
- Unwilling to provide contact information (phone number, email address).

## 3 Outcomes, Exposures, and Additional Variables of Interest

### 3.1 Primary Outcome(s)

The primary outcome of this study is the number or rate of HIV home self-test kits ordered per day for each internet platform used. The variable name is ORA\_REDEEMED, where there are 3 categories per study participant: “Yes” if a self-test kit was redeemed, “No” if a self-test was not redeemed, and “Over 60 Days” if it took over 60 days to redeem (which is counted as “No”).

### 3.2 Secondary Outcome(s)

The secondary outcomes for this study are related to investigating if other factors such as participants’ substance use affect the number of test kits ordered.

| Outcome                                         | Description                                                            | Variables and Source    | Specifications                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------------------|------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reported substance use                          | Degree of substance use per participant.                               | Q13_1,Q13_2,Q13_3,Q13_4 | <p>For each question relating to each substance, the usage is coded as 1 if the participant agrees to the question and 0 if they disagree. For each substance, take the sum across all questions asking about that substance, and then assign as follows:</p> <p>0 total = “None”<br/> 1 total = “Problem use”<br/> <math>\geq 2</math> total = “High risk use”</p> <p>For stimulants, opioids, sedatives and prescribed stimulants, the problem use and high risk use categories are combined into one due to there not being many people in those two categories.</p> |
| Stage of health behavior change for HIV testing | Gauging how willing the participant’s attitude is towards HIV testing. | Q15_1                   | <p>1 = Precontemplation (I don't see any need to regularly test for HIV)<br/> 2 = Contemplation (I think I should get tested for HIV regularly, but I am not sure)<br/> 3 = Determination (I'm ready to start getting regularly tested for HIV)<br/> 4 = Action (I'm trying to get tested regularly for HIV)<br/> 5= Maintenance (I've been getting testing for HIV regularly over the past few years.)</p>                                                                                                                                                             |

|                                            |                                                                                                               |        |                                                                                                                                                                                                                                                        |
|--------------------------------------------|---------------------------------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Attitudes toward HIV testing and treatment | Several aspects of the participant's attitude towards HIV testing and treatment.                              |        | The questions are related to agreeing(1) or disagreeing (2) for the following statements:                                                                                                                                                              |
|                                            |                                                                                                               | Q15_3  | Getting tested for HIV helps people feel better.                                                                                                                                                                                                       |
|                                            |                                                                                                               | Q15_4, | Getting tested for HIV helps people from getting HIV.                                                                                                                                                                                                  |
|                                            |                                                                                                               | Q15_5, | People in my life would leave if I had HIV.                                                                                                                                                                                                            |
|                                            |                                                                                                               | Q15_6, | People who tested positive for HIV should hide it from others.                                                                                                                                                                                         |
|                                            |                                                                                                               | Q15_7  | I would rather not know if I have HIV.                                                                                                                                                                                                                 |
| HIV-related stigma                         | Participant opinions on statements relating to stigma against those with HIV.                                 |        | Each question is coded as one of the numbers 1 - 7 (Strongly Disagree, Disagree, Somewhat Disagree, Neither agree nor disagree, Somewhat Agree, Agree, Strongly Agree) for the participant's opinion on the following statements:                      |
|                                            |                                                                                                               | Q14_2  | I feel afraid of people living with HIV/AIDS.                                                                                                                                                                                                          |
|                                            |                                                                                                               | Q14_3  | I could not be friends with someone who has HIV/AIDS.                                                                                                                                                                                                  |
|                                            |                                                                                                               | Q14_4  | People who get HIV/AIDS through sex or drug use got what they deserve.                                                                                                                                                                                 |
|                                            |                                                                                                               | Q14_5  | I feel anger toward people with HIV/AIDS.                                                                                                                                                                                                              |
| Medical mistrust                           | Participant's response to several questions that determine how much trust they have in medical organizations. |        | For Q16_1, the coding is 28=Strongly agree; 30=Agree; 33=Disagree; 34=Strongly disagree with the statement, while for the other 6 questions, the coding is 1=Strongly agree; 2=Agree; 6=Disagree; 7=Strongly disagree<br><br>Corresponding statements: |
|                                            |                                                                                                               | Q16_1  | You'd better be cautious when dealing with healthcare organizations.                                                                                                                                                                                   |

|                              |                                       |        |                                                                                                                                                     |
|------------------------------|---------------------------------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|

| Have you ever been tested for HIV in your lifetime?                                                                            |  | Q11_5 | 1=Yes, 2=No                                                                                                                                                                                                                                                                                                                                                                                                                        |
| If you have not been tested for HIV, which one of the following would you say is the MAIN reason why you have not been tested? |  | Q11_7 | 1= It's unlikely you've been exposed to HIV; 2 = You are afraid to find out if you are HIV positive; 3 = You didn't want to think about HIV or about being HIV positive; 4 = You were worried your name would be reported to the government if you tested positive; 5 = You don't like needles; 6 = You don't trust the results to be confidential; 7 = You didn't know where to get tested; 8= Some other reason. Please specify. |

## 4 Statistical Analysis Plan

This is a longitudinal observational study that is not randomized. After clicking on the ad on one of the online platforms, participants are shown information on the study and can opt-in to participate. After completing the baseline evaluation, they are told to order an HIV self-test kit, and then there are 2 follow-up surveys at 14 and 60 days. For the 14-day follow-up, the participants are asked about their usage of PrEP and if they sought medical care if they tested positive for HIV. For the 60-day follow-up, they are then asked about some of the secondary outcomes like their attitudes around PrEP. Thus they are in the study for around 2 months.

### 4.1 Demographic and Clinical Characteristics ("Table 1")

The variables in Table 1 are as follows:

| Outcome                           | Description                                                                                                                    | Variables and Source | Specifications                                                                                                                                                                                                                                 |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Race                              |                                                                                                                                | Q5_3                 | 25= American Indian or Alaska Native; 26= Asian; 24= Black or African American; 27= Native Hawaiian or Pacific Islander; 23= White; 28= Other, please specify                                                                                  |
| Age                               |                                                                                                                                | Q3_1                 | Whole numbers                                                                                                                                                                                                                                  |
| Ethnicity                         | Are you Hispanic/Latino?                                                                                                       | Q5_1                 | 1=Yes; 2=No                                                                                                                                                                                                                                    |
| History of PrEP uptake            | Have you ever taken PrEP?                                                                                                      | Q6_2                 | 1 = Yes, but I haven't taken PrEP in the past 6 Months; 2= Yes, but I am currently taking PrEP; 3=No, I have never taken PrEP                                                                                                                  |

#### 4.2 Analyses Plan for Aim 1

For the primary outcome, a Poisson regression model will be used to model the response (number of test kits ordered) with a log link. According to Appendix 1, with wave number  $i$  and platform number  $j$ , the outcome  $o_{ij}$  is given by:

$$\log(o_{ij}) = \log(t_i) + \alpha + \beta_i + \gamma_j + \beta\gamma_{ij}$$

Where:

$t_i$  is the time that the wave  $i$  platforms were recruiting.

$\alpha$  is the intercept/grand mean.

$\beta_i$  is the main effect of wave  $i$ .

$\gamma_j$  is the main effect of platform type  $j$ .

$\beta\gamma_{ij}$  is the interaction term between wave and platform effect.

The corresponding rate for the Poisson process is given by:

$$r_{ij} = \exp(\alpha + \beta_i + \gamma_j + \beta\gamma_{ij})$$

These rates will be estimated from the data as well as their 95% confidence intervals.

The original plan was to compare rates within waves across platforms:

|        | Social Media | Dating Apps | Info Sites |
|--------|--------------|-------------|------------|
| Wave 1 | Facebook     | Grindr      | Google     |
| Wave 2 | Instagram    | Jack'd      | Bing       |

- Social Media vs Dating Apps
- Social Media vs Info Sites
- Dating Apps vs Info Sites

But due to the fact that there was not enough recruitment in Wave 1, each platform was compared to every other platform in the same wave individually:

- Facebook vs Grindr
- Facebook vs Google
- Grindr vs Google
- Instagram vs Jack'd
- Instagram vs Bing
- Jack'd vs Bing

Additionally, there was originally a third wave (Twitter, Yahoo, and Hornet), but this was excluded from the final analysis due to no participants signing up and no test kits being ordered.

#### 4.3 Analyses Plan for Aim 2

For the secondary and exploratory outcomes, univariate tests and 95% confidence intervals will also be used.

For each of the six secondary aims, the participants are split into 2 groups: those who did order a self-test kit within 60 days, and those who did not. Then, their responses to each of the secondary aims are summed per category, and a statistical test on the resulting contingency table is ran to determine if the 2 groups were significantly different in their responses.

- Reported substance use: Fisher's exact test
- Stage of health behavior change for HIV testing: Fisher's exact test
- Attitudes toward HIV testing and treatment: Wilcoxon rank test
- HIV-related stigma: Fisher's exact test
- Medical mistrust: Wilcoxon rank test
- Opinions about PrEP measures: Wilcoxon rank test

#### ***4.4 Analyses Plan for Aim 3***

For the exploratory aim, the plan is to record the money spent per platform, and the clicks, impressions, and click through rates of each.

## **5 Limitations**

There is an inherent bias to this study design, as it depends on survey responses, which are entirely voluntary, meaning that it is more likely for people with more extreme experiences to bother responding. People may not choose to opt-in to the study at all after clicking on the ad to learn more about PrEP/HIV prevention.

Additionally, the focus on rate of HIV test kit ordering doesn't take into account the differences in number of people who use each type of internet platform.

As according to the manuscript, the study was done in states that were known for having high rates of HIV, so it may not be generalizable to the rest of the US. Additionally, there was low engagement with some of the waves, for example with Bing having zero participants, which impacted the quality of the analysis. Finally, these findings are specific to the sites selected, as they were selected due to their popularity and grouped into platforms based on similarities (such as Facebook and Instagram both counting as social media).

## **6 Addendum for Additional Analyses**

In the study, due to low enrollment in the first wave of internet platforms, it was rebooted for a second time following the end of the second wave, and the data from both the first and second iterations of the first wave were combined for statistical analysis of the first wave.

## 7 Appendix

Primary outcome table shell:

| Type of platform               | Wave | Number of days for each wave | Number of test kits ordered | Order rate (ordered test kits/day) |
|--------------------------------|------|------------------------------|-----------------------------|------------------------------------|
| <b>Social media site</b>       |      |                              |                             |                                    |
| Facebook                       | 1    |                              |                             |                                    |
| Instagram                      | 2    |                              |                             |                                    |
| <b>Subtotal</b>                |      |                              |                             |                                    |
| <b>Dating app</b>              |      |                              |                             |                                    |
| Grindr                         | 1    |                              |                             |                                    |
| Jack'D                         | 2    |                              |                             |                                    |
| <b>Subtotal</b>                |      |                              |                             |                                    |
| <b>Information search site</b> |      |                              |                             |                                    |
| Google                         | 1    |                              |                             |                                    |
| Bing                           | 2    |                              |                             |                                    |
| <b>Subtotal</b>                |      |                              |                             |                                    |
| <b>Total</b>                   |      |                              |                             |                                    |

Exploratory outcome table shell:

| Platform                 | Impressions | Clicks | Click-through rate (%) | Users screened | Enrolled participants | Total funds spent (US \$) |
|--------------------------|-------------|--------|------------------------|----------------|-----------------------|---------------------------|

## Statistical Analysis Plan Checklist

Below you will find a checklist of recommended items to include in a statistical analysis plan. Some of these are specific to clinical trials (based on this [JAMA paper](#)) and some are other are specific to observational studies (based on [STROBE](#)/[RECORD](#) guidelines), so every item will not be necessary for every project. The biostatistician should start with the SAP template above and add in necessary information from the checklist. Item numbers that are starred (\*) are not explicitly included in the SAP template and should be added by the author if relevant to the project. This checklist was developed using the [CONSORT 2010 Checklist](#).

| Section/Topic                     | Item # | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 | Included (Yes/No/NA) |

| Background and introduction | 8    | Synopsis of scientific background and rationale for the study                                                                                                                                                          |  |
| Aims and Hypotheses         | 9a   | List of all scientific aims/objectives of the study, with specifications of primary, secondary, etc.                                                                                                                   |  |
|                             | 9b   | List of all statistical hypotheses (corresponding to the scientific aims), with specifications of primary, secondary, etc.                                                                                             |  |
| Variables of Interest       | 10a  | List of all outcome/endpoint variables, with a description of their coding/units, timing, and source, corresponding to the statistical hypotheses. If any variables are defined using ICD or CPT codes, list them out. |  |
|                             | 10b  | List of all exposure variables, with a description of their coding/units, timing, and source, corresponding to the statistical hypotheses. If any variables are defined using ICD or CPT codes, list them out.         |  |
|                             | 10c  | List of any additional variables of interest (e.g. covariates, potential confounders, effect modifiers, etc.) in the analysis                                                                                          |  |
|                             | 10d* | Location of data dictionary (or provided as an appendix)                                                                                                                                                               |  |
|                             | 10e* | Report category boundaries if continuous variables are collapsed into categories, and describe any other relevant data transformations                                                                                 |  |
| Causal Graph                | 11*  | May be helpful to include a DAG or other graph/diagram that describes the way the variables of interest are presumed to relate to each other                                                                           |  |
| <b>Study Methods</b>        |      |                                                                                                                                                                                                                        |  |
| Study Plan and Design       | 12a  | Description of the study design (e.g. parallel group randomized trial, case-control study, cohort study, etc.)                                                                                                         |  |
|                             | 12b* | Study setting, location, and relevant dates (e.g. periods of enrolment, exposure, follow-up, and collection)                                                                                                           |  |
|                             | 12c* | Description of intervention or exposure groups, with allocation ratios, and details of any matching criteria                                                                                                           |  |
|                             | 12d* | Details on randomization (e.g. stratification factors) and blinding procedures                                                                                                                                         |  |
|                             | 12e  | List of eligibility and/or inclusion/exclusion criteria                                                                                                                                                                |  |
|                             | 12f* | Description of screening/enrolment/recruitment processes                                                                                                                                                               |  |
|                             | 12g* | Description of patient flow (e.g. CONSORT diagram)                                                                                                                                                                     |  |
|                             | 12h* | Description of analysis population (e.g. intention to treat, per protocol, etc.)                                                                                                                                       |  |
|                             | 12i* | Definitions of adherence/compliance, protocol deviations, loss-to-follow-up, adverse events, etc.                                                                                                                      |  |
|                             | 12j* | Time points at which outcomes are measured                                                                                                                                                                             |  |
|                             | 12k* | Timing of final analyses (are all outcomes analysed collectively, or will short-term outcomes be analysed separately from long-term outcomes, etc.)                                                                    |  |

|                                  |      |                                                                                                                                                                                                                                                                                                                                                                                 |  |
|----------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Sample Size                      | 13a* | Sample size calculation or justification (either provided in full or summarized, with link to original source)                                                                                                                                                                                                                                                                  |  |
|                                  | 13b* | Description of pre-planned subgroup analyses, power for these analyses, and planned multiple comparison adjustment procedures                                                                                                                                                                                                                                                   |  |
|                                  | 14a* | Description of what interim analyses will be conducted at which time points, and what methods used to adjust significance levels due to the interim analysis                                                                                                                                                                                                                    |  |
|                                  | 14b* | Details of any guidelines (e.g. safety, futility) for stopping the study early                                                                                                                                                                                                                                                                                                  |  |
|                                  | 14c* | Details of any changes to trial design due to interim analyses (e.g. enrolling more patients)                                                                                                                                                                                                                                                                                   |  |
| Interim Analyses                 | 15a  | Description of data collection/acquisition process, with contact information for team member responsible                                                                                                                                                                                                                                                                        |  |
|                                  | 15b  | Description of data flow/transfer from primary data collection through to creation of final analysis dataset                                                                                                                                                                                                                                                                    |  |
|                                  | 15c  | Data transfer method and date                                                                                                                                                                                                                                                                                                                                                   |  |
|                                  | 15d  | Folder location where datasets are stored                                                                                                                                                                                                                                                                                                                                       |  |
|                                  | 15e* | Description of any additional data management, quality control, or processing undertaken                                                                                                                                                                                                                                                                                        |  |
|                                  | 15f* | If any data are extracted from a database, a description of the database and the query used for the extraction, and whether/how it was merged with any data from outside that database. If the study involved linkage of databases, consider use of a flow diagram to demonstrate the data linkage process, including the number of individuals with linked data at each stage. |  |
|                                  | 15f* | Description of any other data sources incorporated in the analysis                                                                                                                                                                                                                                                                                                              |  |
| Missing Data                     | 16a* | Description of sources and magnitudes of missing data                                                                                                                                                                                                                                                                                                                           |  |
|                                  | 16b* | Description of how missing data patterns will be presented/summarized (may be helpful to have a table shell or draft CONSORT-style diagram)                                                                                                                                                                                                                                     |  |
|                                  | 16c* | Description of contingency plans for handling missing data in analysis                                                                                                                                                                                                                                                                                                          |  |
| Simulations                      | 17a* | If conducting a simulation, a description of the purpose of the simulation and its design (e.g. fully factorial, partially factorial, grid search, etc.)                                                                                                                                                                                                                        |  |
|                                  | 17b* | Define the fixed and variable factors or parameters in the simulation, the estimands/targets of the simulation, and the performance measures to be estimated (with justifications of their relevance to the estimands/targets)                                                                                                                                                  |  |
|                                  | 17c* | Description of the tabular and graphical presentations of simulation results and their interpretation                                                                                                                                                                                                                                                                           |  |
| <b>Statistical Analysis Plan</b> |      |                                                                                                                                                                                                                                                                                                                                                                                 |  |
| Statistical Significance         | 18a* | Hypothesis testing framework (e.g. superiority, equivalence, non-inferiority), or description of alternative analytic framework (e.g. evaluation of a posterior in a Bayesian analysis, etc.)                                                                                                                                                                                   |  |

|                             |      |                                                                                                                                                                                                                                              |  |
|-----------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Descriptive Statistics      | 18b* | Level of significance for primary hypotheses, including a description and rationale for any multiple comparisons adjustment or Type I error control procedures                                                                               |  |
|                             | 18c* | Description of any decision-making rules based on confidence intervals, credible intervals, prediction intervals, Bayes' factors, or other alternative inferential methods                                                                   |  |
|                             | 18d* | Description of how the results of any hypothesis tests (or alternative inferential methods) will be interpreted with respect to both the statistical hypotheses and scientific aims/objectives of the study                                  |  |
|                             | 19a* | List of characteristics (e.g. demographic, clinical) to be summarized descriptively (e.g. "Table 1")                                                                                                                                         |  |
|                             | 19b* | Description of how these characteristics will be summarized descriptively (e.g. means/medians vs. N (%), tabular displays, graphical displays, etc.)                                                                                         |  |
|                             | 19c* | Summarize follow-up time (e.g. average and total amount) and number of events                                                                                                                                                                |  |
| Analysis Methods            | 20a  | For each aim/hypothesis (see items 9a/9b), a description of what analysis method will be used and how the results from this method will be reported and interpreted                                                                          |  |
|                             | 20b* | Description of any transformations, standardizations, covariate or confounder adjustments, weighting, or stratification methods to be used and why.                                                                                          |  |
|                             | 20c* | For each analytic method proposed, a description of the assumptions of that method and what processes will be used to evaluate whether or not those assumptions hold                                                                         |  |
|                             | 20d* | Details of contingency plans/alternative methods to be used if the assumptions are found not to hold                                                                                                                                         |  |
|                             | 20e* | In the case of non-standard test statistics, formulas provided for the test statistic with a description of the mathematical null hypothesis, how significance is determined, and how the test statistic is interpreted                      |  |
|                             | 20f* | In the case of regression models, formulas provided for the full model with a description of which parameters are to be used, how they will be interpreted, how confidence intervals will be constructed, etc.                               |  |
|                             | 20g* | In the case of survey, hierarchical/nested, or clustered data, a description of what methods will be used to adjust for the data structure and why (e.g. if using a GEE, describing which correlation structure and why it was chosen, etc.) |  |
|                             | 20h* | For non-continuous outcomes, clearly explain the effect used (e.g. risk difference, risk ratio, odds ratio, etc.), whether it is relative or absolute, and justify why that was chosen as the effect measure of interest                     |  |
|                             | 20i* | Documentation of any non-standard methods used (e.g. using alternative degree of freedom calculation methods, using a non-canonical link function, etc.)                                                                                     |  |
|                             | 20j* | Description of any limitations, sources of bias, internal/external validity, and other relevant discussions concerning the interpretation and generalizability of the design or methods used                                                 |  |
| Additional Analysis Methods | 21a* | Description of any pre-planned sensitivity analyses and how they will be interpreted                                                                                                                                                         |  |
|                             | 21b* | Description of pre-planned subgroup analyses, power for these analyses, and planned multiple comparison adjustment procedures                                                                                                                |  |
|                             | 21c* | Description of any additional post-hoc calculations or analyses (e.g. evaluating interaction/modification effects, calculating mediation or local average treatment effects, evaluation of AUROC curves, etc.)                               |  |

|                               |      |                                                                                                                                                                                                              |  |
|-------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Exploratory Analyses          | 21d* | If conducting any bootstrap analyses, a description of the sampling algorithm and number of iterations used                                                                                                  |  |
|                               | 21e* | If conducting any cross-validation procedures, a description of how the cross-validation is conducted (e.g. leave-one-out, train/validation/test, etc.)                                                      |  |
|                               | 22a* | Description and justification for any pre-planned exploratory analyses and what methods will be used to conduct them                                                                                         |  |
|                               | 22b* | Framework for conducting any unplanned exploratory analyses and how they will be integrated into the planned analysis                                                                                        |  |
| Software                      | 23*  | List of statistical software (along with version numbers) to be used for each phase of the analysis; in the case of R or Stata, additionally list any requisite installed packages and their version numbers |  |
| Other                         | 24*  | Description of any additional planned analyses of the data (e.g. a safety analysis looking at adverse event rates for a Data Safety Monitoring Board, etc.)                                                  |  |
| <b>Tables and Figures</b>     |      |                                                                                                                                                                                                              |  |
| Table Shells                  | 25*  | Example tables related to any of the conducted analyses; if possible including any available preliminary data                                                                                                |  |
| Example Figures               | 26*  | Example figures related to any of the conducted analyses; if possible including any available preliminary data.                                                                                              |  |
| <b>References</b>             |      |                                                                                                                                                                                                              |  |
| References                    | 27a  | References for any non-standard statistical methods used                                                                                                                                                     |  |
|                               | 27b  | References (and locations) for any relevant protocols, standard operating procedures, or other documents cited in the SAP                                                                                    |  |
| <b>Additional Information</b> |      |                                                                                                                                                                                                              |  |
| Appendices                    | 28*  | If necessary, appendices may be included (e.g. a full data dictionary, a copy of a Case Report Form, etc.)                                                                                                   |  |
| Addendums                     | 29*  | Any additional analyses conducted that were not included in the SAP should be documented in an addendum, describing the purpose of the additional analysis, when it was conducted, and by whom               |  |
